

TO PIERCE ETERNITY

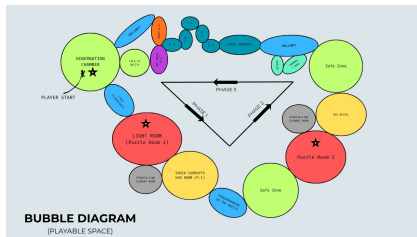

LEVEL DESIGN SAMPLE | ABERTAY MPROF CLIENT-BRIEF TEAM PROJECT FOR HYPER LUMINAL GAMES | 2026 | UES

CONTEXT AND DESIGN PROBLEM

The HUD deliberately misleads the player, so the environment must remain the reliable source of navigation. I designed the playable route to move from trust to suspicion and revelation through spatial distinction, leading lines, controlled sightlines and no-backtracking commitment points.

MY OWNERSHIP AND BOUNDARIES

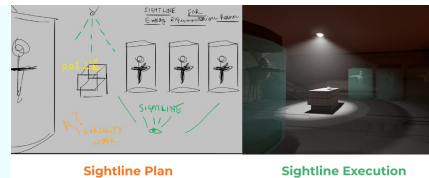

I created the bubble diagram and digital 2D layout, blocked every playable space, placed guidance and gameplay beats, and owned the Underbelly chase route and trap placement. Puzzle Design and LDD co-authorship had a separate owner. Entity/HUD functionality, lighting execution, modular art, props, UI and audio had separate team owners.

1. Revised spatial flow after the project scope changed.

2. Critical path, room functions and commitment gates before blackout.

3. Entity room sightline plan beside the final team-build view.

OBSERVATION -> CHANGE

A client QA session found three identical doors and the safe-room exits ambiguous. The next day I added correct/blocked lighting and two distinction objects - a box and a guide wire - keeping truthful guidance in the environment rather than the unreliable HUD. Later observers independently identified the wire as readable guidance.

Derived from *To Pierce Eternity - Level Design Document* (internal 18-page team document, 2026), credited by discipline to **Advitiya (Level Design)** and a separate Puzzle Design co-author. This recruiter excerpt includes only Advitiya Singh Kanta's verified Level Design scope and corroborated iteration evidence; puzzle specifications and team-owned systems are omitted. Abertay MProf client-brief project; not employment at Hyper Luminal Games.
