SUMMARY

Level Designer with seven months of professional experience on Revolver Rift, an AA PvPvE extraction shooter in development at Kahr Works GmbH, and two shipped client projects delivered for Hyperluminal and V&A Dundee. I design levels that guide players without UI, using readable layouts, deliberate pacing and decisions backed by playtesting. MProf Games Development, Abertay University.

EXPERIENCE

Level Designer, Kahr Works GmbH

Dec 2024 - Jun 2025

Revolver Rift, AA PvPvE extraction shooter (in development), Unreal Engine 5, Dornbirn, Austria

- Designed and iterated more than 15 in-game compounds from 2D layout to playable blockout.
- Built layouts around approach choice, sightline control and contestable positions with multiple entries.
- Balanced verticality, cover and traversal across mission zones while designing inside performance budgets.
- Presented layouts at weekly level reviews in a multinational team and iterated on playtest findings.

Level Designer, Hyperluminal (client project)

May - Aug 2026

To Pierce Eternity, sci-fi puzzle horror, Unreal Engine 5, team of 12, released

- Owned the player space end to end: bubble diagram, 2D layouts, level beats and the full blockout of every playable area.
- Designed the chase sequence and trap placement, and scripted level logic, splines and dialogue triggers in Blueprints.
- Replaced a requested objective marker with environmental guidance after client QA testing, protecting the game's core deception mechanic.
- Acted as level integration point for art kit, props and lighting from week 9 to ship.

Lead Level Designer and Audio, V&A Dundee (client project)

Feb - May 2026

Hull & Horizon, first-person museum experience, Unreal Engine 5, team of 5, released

- Led level design of a museum installation and ran structured playtesting with 10 visitors on the museum floor.
- Delivered post-playtest iteration: reworked a failing beat, contextual prompts and a reflective ending sequence.
- Condensed the beat map from 11 beats to 9 to hold a 5 to 7 minute target and reduce scope risk.

Lead Level Designer, university team project

Jun 2024 - Nov 2024

- Led level design across 2D layouts, blockouts and environmental storytelling.
- Project selected for IGDC 2024, India's largest game developer conference.

SELECTED PROJECTS

GoodBabies, Level Designer

10 weeks, team of 6

- Single-room social deception space: fixed-POV readability, threat staging and beat-mapped pacing. Released, rated 5.0.

Baby's First Tower Defence, Level Designer

2 weeks, team of 6

- Open snow arena using terrain elevation, funnelling and a central landmark to keep the space readable. Released.

EDUCATION

MProf Games Development, Abertay University

2025 - 2026

BSc Game Design, Animation and VFX, Chandigarh University

2022 - 2025

SKILLS

Unreal Engine 5, gameplay blockout, level flow and pacing, 2D layouts and beat maps, Blueprint scripting, environmental storytelling, sightline and guidance design, encounter and trap design, playtesting and structured observation, level design documentation, audio integration, level optimization, version control, Unity, Maya.
